IMPORTANT NOTICE

The BLE Remote **does not support voice control,** and the **voice button** on the device is not functional.

HOW TO USE BLE REMOTE TO CONTROL YOUR TV

Create Virtual IR Remote in App

- Follow the user manual included to add the eRemote to the LinknLink app and access the device page.
- Click the "+" button and select "TV" or "Set Top Box." Then, follow the on-screen prompts to create a virtual IR remote for your specific TV/STB. Make sure to test the buttons within the app to ensure they work correctly.

Pair BLE Remote

- Click "BLE Remote" at the top of the hub page and choose "Bluetooth Remote." Press and hold both the left and right keys on the BLE Remote simultaneously to
- enter pairing mode. Then, click "Next" in the app. The hub will automatically search for and pair with the BLE Remote.

Bind BLE Remote with TV/STB

- Access the BLE Remote page in the app and click any button you wish to bind on the physical BLE Remote.
- Choose the virtual IR remote you created earlier and select the specific button you want to bind with the chosen BLE Remote button.
- Once the binding is complete, pressing the corresponding physical button on the BLE Remote will trigger an IR command sent from the eRemote hub to control your TV/STB. No need to directly point the BLE Remote at your TV or maintain line-of-sight for it to function.

Use BLE Remote mini for LinknLink Routines

- Click the "Routines" tab at the bottom in the App and click "+" to create a Routine.
- Click to add an event under "When event triggers from" > "Device operated" > BLE Remote and select a key.
- Click to add an action under "Do actions" > "Control Certain Device" and select a device and specify the action. You can add multiple actions or scenes if you have more devices. Then save the routine.
